

G3

- **Consultation was a sham. The public response was huge but little if any feedback was listened to, they just played with the heights of the two towers, density stays the same.**
- **Its high density.** The proposal is nearly four times more than the current maximum density recommendation for the site. It crams 144 homes into an area the size of two tennis courts.
- **This proposal represents massive excessive development** of site and local area when we look at existing large blocks of flats and those being nearby. It also provides more homes of the type Ealing needs least, studio flats and small one and two bed flats.
- **It is not truly affordable.** It would not really help people on the housing list or people on typical incomes in Ealing.
- **Very poor design.** The flats are small and have little or no outside amity space. What there is largely unusable due to railway noise or because it's not safe for small children.
- **Way too tall.** This site is clearly unsuitable for a tall building if the Council looks at the appropriate tall buildings guidance and policies. It's more than half a high again as tallest building in West Ealing and sits at the edge of residential and conservation areas.
- **Brutal design.** Putting this number of flats on a very small site creates an oppressive structure that dominates and spoils the local environment.
- **Breaks existing site specific guidance EAL 12 for the site and West Ealing Neighbourhood plan.**
- **Impact on surrounding mainly residential environment.** Its oppressive, overshadowing, will result in loss of light.
- **Privacy.** It will overlook hundreds of private gardens and look down into loft rooms.
- **Carbon.** This is totally inconsistent with Ealing's zero carbon pledge. Tall buildings have big carbon footprints for building them and are very energy hungry to run.
- **Heritage.** It would destroy views from St Stephen's Conservation Area and out of keeping with locally listed Sorting Office, Stowells Corner, Drayton Court Hotel and neighbouring Victorian two storey homes.

- **Crossrail.** Having 144 homes within 10 meters of a major **Crossrail station** will interfere with that station, just the likely deliveries could cause major problems.
- **Disabled access.** Only one blue badge space for 15 wheelchair accessible flats and no provision for support services visiting (carers, doctors etc.)
- **Amenity space.** There is little or no usable amenity space. The balconies are likely to be unusable due to railway noise. The roof garden would be noisy and is unsafe for children.
